

A. Corpus

Chunk size is set in the ENCODER's tokenizer, not in words: financial text runs 1.6-1.7 tokens/word and number-dense tables far higher.

B. Labels

Restricting gold to one filing removes cross-company boilerplate matches: 52.8% of questions previously had gold in multiple filings (max 38).

C. Query

Document routing is a string match — no LLM, no API. Only 14.4% of unrouted top-10 results come from the correct company.
